

Annual Report of Language Assessment Program-Deaf/Hard of Hearing

For FY 2022

**In accordance with K.S.A. 75-5397e which created a language
assessment program for children who are deaf or hard of hearing**

Submitted to:

Kansas Commission for the Deaf/Hard of Hearing

Senate Committee on Education

House Committee on Education

Report Date: January 31, 2023

This report is submitted in compliance with K.S.A. 75-5397e which requires Kansas Commission for the Deaf/Hard of Hearing (KCDHH) to "publish a report that is specific to language and literacy developmental milestones of children who are deaf or hard of hearing for each age from birth through the age of eight, including those who are deaf or hard of hearing and have other disabilities, relative to such children's peers who are not deaf or hard of hearing. Such report shall be based on existing data reported in compliance with the federally required state performance plan on pupils with disabilities. KCDHH shall publish the report on its website."

INTRODUCTION

Early fluent communication is critical and essential to typical cognitive, social, and emotional development and should be pursued vigorously by any mean or mode that is effective for each individual child. The purpose of K.S.A. 75-5397e is to ascertain and monitor the acquisition of language by young children who are deaf/hard of hearing, which will provide the data needed to determine whether current interventions are effective and should be continued or whether alternative interventions should be considered.

The Language Assessment Program-Deaf/Hard of Hearing (LAP-DHH) is being implemented pending funding and staffing of the program. Beginning in July 2018, LAP-DHH specialists began assessing children who were currently being seen through Kansas School for the Deaf's (KSD) Sound START program (ages birth-three). In August 2019, children who were in KSD's Early Childhood were added to LAP-DHH. Children who were seen through KSD's Outreach Program were also added. While additional funding was not obtained for FY 2020 or FY 2021, the program expanded as was able. Sound START continued to enroll newly identified children in their program, and all children ages three through eight at KSD were enrolled in the LAP-DHH. Moving forward, children will be enrolled in the program when they are ages birth to three.

METHODOLOGY

From July 1, 2021 to June 30, 2022, 132 children who were deaf/hard of hearing were assessed through the LAP-DHH. Fifty-five children were ages birth to three, 33 children were ages three to five, and 44 children were ages five through eight (Figure 1). Fifty-five children were receiving early intervention services, 72 children were receiving special education services, one student had a 504 plan, and four students were not receiving any additional services (Figure 2). Thirty-seven children attended Kansas School for the Deaf.

Age Range of Children Assessed

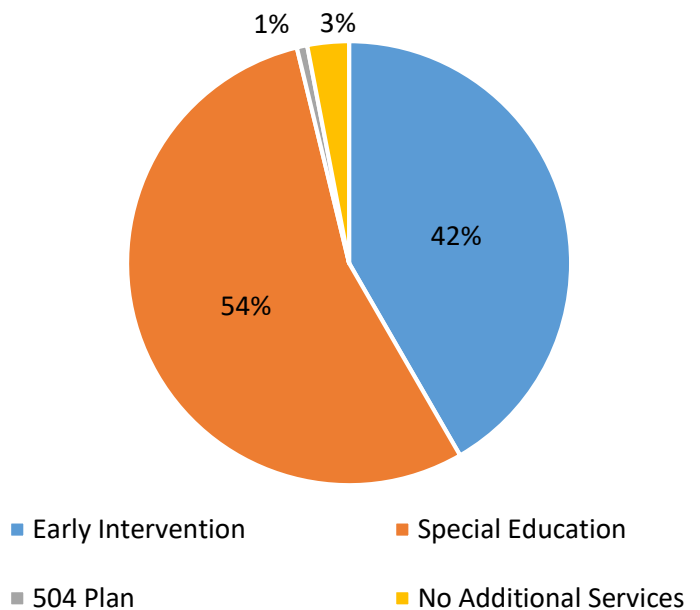

Figure 2
Services Received

Children were assessed following a specific assessment protocol which included using one or more of the following assessments: a narrative, conversation and/or play language sample; *MacArthur-Bates Communicative Development Inventories-English*; *ASL-CDI 2.0*, *Visual Communication and Sign Language*

Checklist; Cottage Acquisition Scales for Listening, Language, and Speech; Peabody Picture Vocabulary Test; Expressive Vocabulary Test; Structured Photographic Expressive Language Test; and Language Processing Test. If a child had additional disabilities and/or used pre-linguistic communication, that child was assessed using the *Communication Matrix*. If possible, children were also observed in their home environment and/or their school setting. The assessments were administered and analyzed by LAP-DHH specialists trained in the administration of those specific assessments.

Using the results of the assessments, LAP-DHH specialists completed a *Language Milestones: American Sign Language and English* document for each child. The document indicated whether or not the child had met their age-appropriate language milestones. The results reported below are based on that document.

RESULTS

Of the 132 children who were assessed through the LAP-DHH, 111 did not meet milestones in either ASL or spoken English. Twenty-one met age-appropriate milestones in one or both languages (Figure 3).

Of the 62 children whose ASL was assessed, 54 children did not meet the age-appropriate milestones (Figure 4). Of the 104 children whose English was assessed, 89 children did not meet the age-appropriate milestones (Figure 5). Twenty-two children had an identified additional disability, and twelve children were assessed using the Communication Matrix.

EXISTING DATA/State Performance Plans provided by KSDE

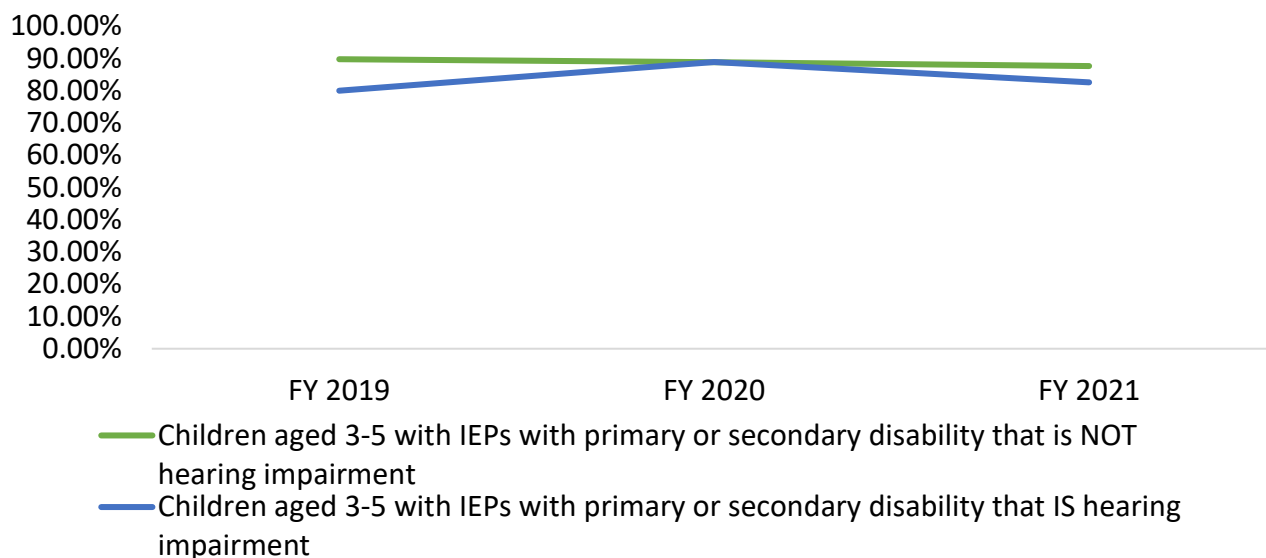

K.S.A. § 75-5397e(h) requires that this report include “existing data reported in compliance with the federally required state performance plan on pupils with disabilities.” The Kansas State Department of Education (KSDE) is responsible for submitting the state performance plan under Part B of the Individuals with Disabilities Education Act, the federal law with rights and responsibilities for children with disabilities and an individualized education program (IEP). The advisory committee on the language assessment program determined that the most relevant portion of the Part B state performance plan to the current population and focus of the language assessment program is Indicator 7.B1: The percent of preschool children aged 3 through 5 with IEPs who demonstrate improved acquisition and use of knowledge and skills (including early language/communication and early literacy). During the 2021-22 school year (the FFY 2021 state performance plan), 87.64% of preschool children aged 3 through 5 with IEPs with any primary or secondary disability category that is not hearing impairment* demonstrated improved acquisition and use of knowledge and skills (including early language/communication and early literacy). In contrast, during the 2021-22 school year (the FFY 2021 state performance plan), only 82.61% of preschool children aged 3 through 5 with IEPs with a primary or secondary disability category of hearing impairment demonstrated improved acquisition and use of knowledge and skills (including early language/communication and early literacy) (Figure 6).

The percentage decreased substantially for children with a primary or secondary disability category of hearing impairment from the 2020–21 school year (the FFY 2020 state performance plan). During the 2020–21 school year (the FFY 2020

state performance plan), 88.87% of preschool children aged 3 through 5 with IEPs with any primary or secondary disability category that is not hearing impairment demonstrated improved acquisition and use of knowledge and skills (including early language/communication and early literacy). During the 2020–21 school year (the FFY 2020 state performance plan), 88.89% of preschool children aged 3 through 5 with IEPs with a primary or secondary disability category of hearing impairment demonstrated improved acquisition and use of knowledge and skills (including early language/communication and early literacy).

CONCLUSION

Limited access to language (signed and/or spoken) remains a primary factor causing the language delay of deaf/hard of hearing children (DHH), and the potential impacts of a language delay have significant, long-reaching effects. In fact, limited access to language and communication has been identified as a critical root cause for the gaps in postsecondary outcomes of people who are DHH. Language and communication are the basis for development in *all* aspects of life. Language delay can have a negative effect on an individual's social-emotional well-being, disposition, cognitive ability, daily living skills, and the ability to be a contributing, tax-paying citizen. Without language, our DHH children will not have the same opportunities to reach social, academic, and employment success as their hearing peers.

The Language Assessment Program-Deaf/Hard of Hearing looks forward to continuing to work collaboratively with all stakeholders to implement and advance the program which will lead to positive language acquisition in Kansas' children who are deaf/hard of hearing. Early language acquisition will result in early fluent communication, data-driven interventions, language without limits, and deaf/hard of hearing children with age-appropriate language facility.

*Hearing impairment is the term used in federal special education law.
