- Network software installation and configuration.

"Pendleton County has been using and depending on Walt for several years. He always finds the time to answer questions and is always quick to respond to any issues we have."

~Trent Sites
Pendleton County Schools

"Trust me you won't regret it. Small counties can't afford a systems engineer of Walt's caliber. He has pulled me out of the fire in so many emergencies. I can honestly say my job has always depended on Walt's ingenuity."

~Jay Keplinger
Grant County Schools

Cooperative Advantage

By utilizing EPIC, we can share Walt's expertise among counties, whether they are a member of EPIC or another county in the state in need of services from a Systems Engineer. Walt built relationships with several technology contacts while working at Pomeroy, and has first hand knowledge of the networks, systems and devices needed to run counties efficiently and effectively.

"Absolutely, Walt is incredible. He has helped us with server projects and training of our technical staff, and his professionalism and technical abilities are second to none."

~Vicky Cline

How do you get started? As easy as 1,2,3!!

1. Contact Walt Corley at walter.corley@wvesc.org
2. Choose a package that best suits your needs.
3. We will send you an MOU or quote. When we receive a purchase order, you will be ready to go!

"Walt's services to our county (and other counties in the EPIC Coop) are extremely important. This is especially true for smaller counties like Morgan. We are committed to what he can provide us technically, and I feel other counties would commit as well. I believe this is a needed and valued service that other counties would want to have in their resource arsenal. This cooperative, shared expense approach to his services is cost effective. It would be extremely expensive if otherwise purchased directly from a vendor or state contract. His expertise in the areas of virtual SAN storage, VM virtual environments, and MS Systems Center alone are highly prized areas of expertise."
