# Understanding Crime Scene Investigations:

1. Why is it important to collect physical evidence from a crime scene?
  - A. To establish the sequence of events
  - B. To corroborate statements
  - C. Both A and B
  - D. None of the above
2. What does the term "secondary crime scene" refer to?
  - A. The primary scene of the crime
  - B. A scene with less important evidence
  - C. An area where the body is discovered
  - D. An unknown crime scene
3. Who is responsible for processing a crime scene in smaller law enforcement agencies?
  - A. First responders
  - B. Specialized crime scene specialists
  - C. Forensic laboratory analysts
  - D. Detectives
4. What does Locard's Exchange Principle suggest?
  - A. Every person who enters or exits the scene will alter the crime scene
  - B. The crime scene will remain unchanged regardless of who enters or exits
  - C. Only the investigators can influence the evidence at the crime scene
  - D. None of the above

5. What is the purpose of conducting presumptive tests at the crime scene?
- A. To confirm the presence of specific compounds
  - B. To narrow down the field of possibilities for a certain class of substance
  - C. To expedite the processing at the laboratory
  - D. All of the above
