

Welcome to our
4th grade
Parent Learning
Workshop

Today we will be looking at the Area Model Strategy of Multiplication.

This is the strategy we teach our students to use when multiplying.

Standard:

NBT5: Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers.

For an area model, we need to create a diagram to show our partial products.

$$54 \times 3 = \underline{\quad}$$

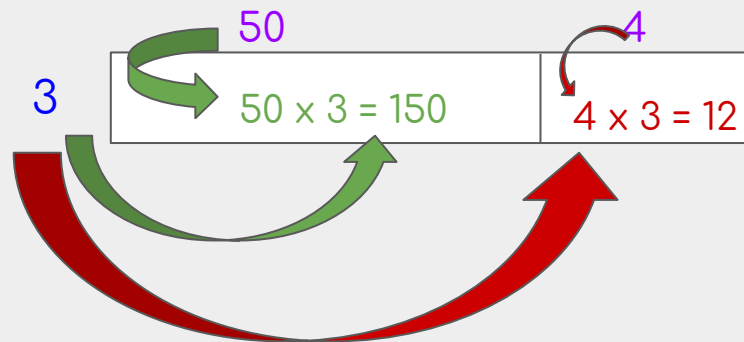

Step 1:
Decompose 54 into 50 and 4 and place them in our model.

Step 2:
Place your other factor into the model.

Step 3:
Match the factors and multiply.

Step 4:
Match the second set of factors and multiply.

Step 5:
Add the products.

$$\begin{array}{r} 150 \\ + \quad 12 \\ \hline 162 \end{array}$$

$$54 \times 3 = 162$$

74 x 24

Step 1: Let's decompose our first number. $74 = 70 + 4$ These numbers go into our model across the top.

Step 2: Decompose the second factor. $24 = 20 + 4$. These numbers go into our model to the side.

Step 3: Begin matching our boxes to multiply.

Step 4: Continue to the next box and match and multiply.

Step 5: Continue to the next box and match and multiply.

Step 6: Continue to the next box and match and multiply.

Step 7: Add to find the product.

	70	4
20	 $20 \times 70 = 1400$	 $20 \times 4 = 80$
4	 $4 \times 70 = 280$	 $4 \times 4 = 16$

$$\begin{array}{r} 1,400 \\ 280 \\ 80 \\ + \quad 16 \\ \hline 1,776 \end{array}$$

99 x 36

Step 1: Let's decompose our first number. $99 = 90 + 9$ These numbers go into our model across the top.

Step 2: Decompose the second factor. $36 = 30 + 6$. These numbers go into our model to the side.

Step 3: Begin matching our boxes to multiply.

Step 4: Continue to the next box and match and multiply.

Step 5: Continue to the next box and match and multiply.

Step 6: Continue to the next box and match and multiply.

Step 7: Add to find the product.

	90	9
30	$30 \times 90 = 2700$	$30 \times 9 = 270$
6	$6 \times 90 = 540$	$6 \times 9 = 54$

$$\begin{array}{r} 2,700 \\ 540 \\ 270 \\ + \quad 54 \\ \hline 3,564 \end{array}$$
