STUDIES CENTER

- Program duration:
8:30 until 1:30 including
a break for lunch on the
grounds.
- Emphasis on Standards
3,4,11, and 17
for Environmental. #7, 8
9,10, and 13 for Biology.
- Email scalderone@mcps.com
For availability

This field trip, which is funded by SEA Grant, is an opportunity for high school teachers and students to explore and observe different ecosystems in the temperate deciduous forest of Alabama. Students observe and record the differences in the abiotic and biotic factors in each ecosystem. Emphasis is placed on effects of human activities on these critical habitats. Representatives of both plants and animals are observed and discussed as well as how some of those organisms are environmental indicators of both good air and water quality.
