

# Construction Pathways

## Construction Vision

My Vision for the Construction program is to increase trade knowledge, and offer a more comprehensive study on the individual Construction trade skilled careers available. Additionally students will have my class for three years where they will learn about safety, power tools, various build technics, have the opportunity for Internships, Welding and Forklift certification. This course study allows them to complete the Pre Apprenticeship program through the United Brotherhood of Carpenters and Joiners of America. The Construction industry continues to grow, change and advance with the needs of the global market, the Construction program will make the necessary modifications to meet the standards and demands of the industry and students. My goal is to continue to fill the “skills gap” with hard working knowledgeable students that are job ready on Day 1.

Dominic Francisco measuring for a notch in his chest project

Jahleena Miranda pulling measurements for her cutting board

Jasmine Chino and Brandon Dude building their cutting boards

Entry level median pay for an apprentice Carpenter is **\$48,260** per year.
