

Mitigation Strategies for Everyday Operations

Staying Up to Date on Vaccinations: Staying up to date on routine vaccinations is essential to prevent illness from many different infections. For COVID-19, staying up to date with COVID-19 vaccinations is the leading public health strategy to prevent severe disease

Staying Home When Sick: People with symptoms of infectious disease, including COVID-19, influenza, respiratory syncytial virus (RSV) and gastrointestinal infections should stay home and get tested for COVID-19. For more information on staying home when sick with COVID-19, including recommendations for mask use for people experiencing symptoms consistent with COVID-19, see CDC Quarantine and Isolation Guidelines

Ventilation Systems: PUSD adheres to CDC and other regulatory bodies as it pertains to standards to limit the spread of COVID-19

Hand Hygiene and Respiratory Droplets: Washing hands can prevent the spread of infectious diseases. Teach and reinforce handwashing with soap and water for at least 20 seconds. Remind everyone in the facility to wash hands frequently and assist young children with handwashing. If handwashing is not possible, use hand sanitizer containing at least 60% alcohol. Teach and reinforce covering coughs and sneezes to help keep individuals from getting and spreading infectious diseases, including COVID-19

Cleaning and Disinfecting: Custodial staff will use enhanced cleaning procedures to clean surfaces at least once a day to reduce the risk of germs spreading by touching surfaces.
