| Math Competencies- Grade 4 |  |  |
| :---: | :---: | :---: |
| Lin-Wood Proficiencies (COMPETENCY) | I Can Statements | Standards |
| Numbers \& Operations in Base 10 <br> Students will demonstrate an understanding of place values by explaining whole numbers, number names, place values, rounding, and comparing numbers. | 1. I can explain the relationship between place-values by multiplying by ten to move one place value to the left and by dividing by ten to move one place value to the right. <br> 2. I can read whole numbers using word, expanded, and standard forms. <br> 3. I can write whole numbers using word, expanded, and standard forms. <br> 4. I can compare two multi-digit numbers using $>$, $=$, and < symbols. <br> 5. I can round numbers to any given place value up to one million. | $\frac{\text { 4.NBT.A. } 1}{\text { 4.NBT.A. } 2}$ |
| Numbers \& Operations in Base 10 <br> Students will demonstrate an understanding of adding and subtracting multi-digit whole numbers by adding and subtracting numbers using the standard algorithm. <br> and <br> Students will demonstrate an understanding of multiplying two two-digit numbers and of multiplying and dividing whole numbers of up to four digits by a one-digit whole number multiply two two-digit numbers, using multiple strategies based on place value and properties of operations. | 1. I can add and subtract multi-digit whole numbers using the standard algorithm with ease. <br> 2. I can multiply a multi-digit number (up to four digits) by a single-digit whole number using a variety of strategies. <br> 3. I can multiply two two-digit numbers using a variety of strategies. <br> 4. I can divide a multi-digit number (up to four digits) by a single digit whole number using a variety of strategies. <br> 5. I can show the relationship between multiplication and division using arrays, area models, and/or equations. | $\frac{4 . \text { NBT.B. } 4,}{4 . \text { NBT.B. } 5}$ 4.NBT.B. 6 |
| Operations \& Algebraic <br> Thinking <br> Students will demonstrate an | 1. I can understand that multiplication can be seen as a comparison of two groups ( 24 is 4 groups of six and 24 is 6 groups of four). | $\begin{aligned} & \text { 4.OA.A. } 1 \\ & \text { 4.OA.A. } 2 \\ & \text { 4.OA.A.3 } \end{aligned}$ |

| understanding of solving for an unknown quantity, represented by a variable, by solving word problems using the four operations, including multi-step, those in which the remainder must be interpreted, and those involving multiplicative comparison. | 2. I can tell which quantity is being multiplied and which quantity is telling how many times, given a multiplicative comparison situation. <br> 3. I can write equations for multiplicative comparison contextual situations. <br> 4. I can solve word problems involving multiplication and division using visual models and equations; using a variable for the unknown quantity. <br> 5. I can tell when they should add or when they should multiply when solving a problem. <br> 6. I can solve multi-step problems with all four operations and use a variable for the unknown quantity. <br> 7. I can interpret any remainder based on the context of a given problem. <br> 8. I can use mental math, estimation, and rounding strategies to see if the answer is reasonable. |  |
| :---: | :---: | :---: |
| Operations \& Algebraic Thinking <br> Students will demonstrate an understanding of algebra patterns and concepts by finding factor pairs for a given number (up to 100), knowing if a number is prime, composite, or neither, and in creating, extending, and identifying patterns in a given rule. | 1. I can find all factor pairs for any whole number up to 100. <br> 2. I can check a number to see if it is a multiple of a given single digit number. <br> 3. I can determine if a whole number from 1 to 100 is prime or composite. <br> 4. I can create/extend a number pattern that follows a given rule. <br> 5. I can create/extend a shape pattern that follows a given rule. <br> 6. I can notice and point out different features in a pattern not stated in the given rule. | $\begin{aligned} & \text { 4.OA.B. } 4 \\ & \text { 4.OA.C.5 } \end{aligned}$ |
| Number \& OperationsFractions <br> Students will demonstrate an understanding of comparing fractions through a variety of strategies to describe equivalency or not, justifying their conclusions, and record the results with the symbols <, =, >. | 1. I can use visual models, words, and numbers to show/explain why fractions are equivalent. <br> 2. I can generate a rule for finding equivalent fractions. <br> 3. I can recognize equivalent fractions. <br> 4. I can understand that fraction comparisons need to refer to the same whole. <br> 5. I can compare two fractions by creating common numerators or common denominators. <br> 6. I can compare two fractions using benchmark fractions. <br> 7. I can compare fractions using the symbols $<,=$, and $>$. | $\begin{aligned} & \text { 4.NF.A. } 1 \\ & \text { 4.NF.A. } 2 \end{aligned}$ |
| Number \& Operations-Fractions Students will demonstrate an | 1. I can add fraction units to get a fraction greater than one. <br> 2. I can understand that one can add and subtract fractions with the | $\frac{\text { 4.NF.B.3, }}{\text { 4.NF.B.3.A }}$ |

| understanding of adding, subtracting fractions and mixed numbers with common denominators and of multiplying a whole number by a fraction, using visual models and equations, in numerical and word problems. | same whole (denominator). <br> 3. I can decompose fractions less than one into fractional parts with the same denominator using visual models, words, or numbers. <br> 4. I can decompose mixed numbers and fractions equal to or greater than one into fractional parts with the same denominator, using visual models, words, or numbers. <br> 5. I can replace mixed numbers with an equivalent fraction greater than one. <br> 6. I can add and subtract mixed numbers with like denominators. <br> 7. I can solve word problems involving addition and subtraction of fractions using visual models and equations. <br> 8. I can use multiplication understandings to multiply a fraction by a whole number. <br> 9. I can multiply a fraction by a whole number using visual models and equations. <br> 10. I can explain how $a / b$ is a multiple of $1 / b$ using visual models and numbers. <br> 11. I can solve word problems involving multiplication of a fraction by a whole number using visual models and numbers. <br> 12. I can rename a fraction with a denominator of 10 as an equivalent fraction with a denominator of 100. <br> 13. I can recognize that two fractions with unlike denominators can be equivalent. <br> 14. I can add two fractions, one with a denominator of 10 and one with a denominator of 100 . | $\begin{aligned} & \frac{4 . \mathrm{NF} \cdot \mathrm{~B} \cdot 3 \cdot \mathrm{~B}}{\text { 4.NF.B.3.C }} \\ & \frac{\text { 4.NF.B.3.D }}{4 . \mathrm{NF} \cdot \mathrm{~B} \cdot 4} \\ & \frac{\text { 4.NF.B.4.A }}{\text { 4.NF.B.4.B }} \\ & \frac{\text { 4.NF.B.4.C }}{4 . \mathrm{NF} \cdot \mathrm{C} \cdot 5} \end{aligned}$ |
| :---: | :---: | :---: |
| Number \& OperationsFractions <br> Students will demonstrate an understanding of decimals by explaining decimal notation, renaming fractions as decimals, decimal size comparisons, and solving decimal word problems. | 1. I can write a fraction with a denominator of 10 or 100 as a decimal. <br> 2. I can locate a decimal on a number line. <br> 3. I can understand that decimal comparisons need to refer to the same whole. <br> 4. I can use visual models to compare two decimals. <br> 5. I can compare two decimals (to hundredths) using $<,=$, and $>$ symbols. | $\frac{\text { 4.NF.C.6, }}{4 . N F . C .7}$ |
| Measurement \& Data <br> Students will demonstrate an understanding of measurement by completing and describing non-metric and metric measurements, solving measurement problems using formulas and solving problems involving time. | 1. I can explain the relative sizes of units within the same system of measurement. <br> 2. I can change larger units into smaller units within the same system of measurement. <br> 3. I can record measurement equivalence within a system in a two column table. <br> 4. I can represent measurement quantities using diagrams such as a number line with a measurement scale. <br> 5. I can use the four operations to solve measurement word | $\frac{\frac{4 . M D \cdot A .1}{4 . M D \cdot A .2}}{\frac{4 . M D \cdot A .3}{3}}$ |

|  | problems, including those with simple fraction or decimal measures. <br> 6. I can use the four operations to solve measurement word problems, including those that require expressing measurements in a larger unit in terms of a smaller unit. <br> 7. I can apply the formula for the perimeter of a rectangle to solve real world and number problems. <br> 8. I can •Apply the formula for the area of a rectangle to solve real world and number problems. |  |
| :---: | :---: | :---: |
| Measurement \& Data <br> Students will demonstrate an understanding of line plots by describing and creating line plots, values on a plot, fraction plotting, and answering line plot questions. | 1. I can create a line plot to display a data set of measurements given in fractions of a unit. <br> 2. I can use information from a line plot to solve problems which may involve fractional measurements. | 4.MD.B. 4 |
| Measurement \& Data AND Geometry <br> Students will demonstrate an understanding of lines (including parallel, perpendicular, and line of symmetry), angles, and shapes by describing, constructing, and identifying angles, twodimensional figures, and classifying two-dimensional figures. | 1. I can understand that angles are formed when two rays share an endpoint. <br> 2. I can understand that an angle is a fraction of a circle. <br> 3. I can understand the concept of angle measurement as degrees within a circle ( 1 circle $=360$ degrees). <br> 4. I can explain how an angle is measured by its reference to a circle. <br> 5. I can understand how angles are measured in degrees. <br> 6. I can measure angles (in whole degrees) using a protractor. <br> 7. I can use a protractor to help sketch an angle to a specified measure. <br> 8. I can understand that an angle can be decomposed into smaller non-overlapping parts (angles). <br> 9. I can understand that the angle measure of the whole is the sum of the measures of its parts. <br> 10. I can solve real world and number problems involving addition and subtraction to find unknown angles on a diagram. <br> 11. I can draw (and label) points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. <br> 12. I can identify points, lines, line segments, rays, angles (right, acute, obtuse), and parallel and perpendicular lines in two dimensional figures. | $\begin{aligned} & \frac{4 . \mathrm{MD} \cdot \mathrm{C} \cdot 5}{4 . \mathrm{MD} \cdot \mathrm{C} \cdot 5 \cdot \mathrm{~A}} \\ & \frac{\text { 4.MD.C. } 5 . B}{4 . M D \cdot C \cdot 6} \\ & \frac{\text { 4.MD.C. } 7}{} \\ & \frac{\text { 4.G.A. } 1}{\text { 4.G.A. } 2} \\ & \text { 4.G.A. } 3 \end{aligned}$ |

|  | 13. I can identify right angles. <br> 14. I can identify right triangles. <br> 15. I can classify two-dimensional figures based on paralle or <br> perpendicular lines and sizes of angles. <br> 16. I can recognize a line of symmetry as a line across a figure <br> when folded so that each half matches the other. <br> 17. I can identify a line of symmetry for a two-dimensional <br> figure. <br>  <br>  <br>  <br>  <br>  <br> 18. I can draw a line of symmetry for a two-dimensional figure. |  |
