FLUORIDE VARNISH AND DENTAL SEALANT CONSENT FORM

Dental sealants are one of the best ways to prevent tooth decay. They are hard plastic coatings which protect the grooved surfaces of permanent teeth. They seal the deep pits and grooves of teeth, keeping bacteria out and preventing decay. By having sealants placed now, your child may be spared future, more extensive dental work. The application is painless and does not require numbing of the mouth or drilling.

This preventative measure has very few risks. In rare cases, as with any dental procedure, gagging or swallowing of dental materials may occur. In addition, your child may notice minor changes in bite that should become less noticeable as excess material wears away over time. Please keep in mind that sealants only protect the chewing (grooved) surfaces of teeth. Therefore, fluoride toothpaste and mouth-rinse are also recommended to protect the smooth surfaces of the enamel.

Fluoride varnish can be painted on the teeth to prevent tooth decay delivering a safe and effective dose of fluoride. The varnish sets up on contact with saliva so children usually cannot swallow the varnish. The varnish will cause the teeth to look yellow for several hours and will gradually wear off. Used at the right levels, it is safe and effective. Swallowing too much fluoride can cause stomach upset or make white or brown spots on permanent teeth.

As a service to our patients, students are transported in with their teachers and classes to the Inscription House Health Center IHS Dental Clinic for screening exams and, if indicated, the placement of sealants.

Please answer ALL the questions below, sign, and return to the school.
