Issue No. 22 / July 2026

Artificial Intelligence Appreciation Day

Artificial Intelligence Appreciation Day is celebrated on July 16 each year. With discoveries in science, tech, and healthcare, A.I. offers the possibility of a more evolved future. A.I. tools already dominate the market making human life much easier. Although many believe that A.I. only emerged in recent years, its foundations reach back further than that. Artificial Intelligence Appreciation Day was created to celebrate the history and accomplishments of A.I. tech and raise awareness about its current and future use cases in human life.

Did You Know?

On July 17, 1997 a programming error temporarily threw the Internet into disarray in a preview of the difficulties that inevitably accompany a world dependent on e-mail, the World Wide Web, and other electronic communications. At 2:30 a.m. Eastern Daylight Time, a computer operator in Virginia ignored alarms on the computer that updated Internet address information, leading to problems at several other computers with similar responsibilities. The corruption meant most Internet addresses could not be accessed, resulting in millions of unsent e-mail messages.

Chromebook Inventory Reminder

Friendly reminder that Chromebook inventory for your school has to be completed and turned into the Tech Department before we will enable ClassLink QR Code usage for grades K-2. Thanks!

System Admin Appreciation Day

System Administrator Appreciation Day is on July 31, it celebrates the professionals who are working around the clock in order to keep our virtual world running. System administrators are people who take care of installing and troubleshooting anything and everything related to I.T. They also keep up with the regular technological advancements. This is why the job of a system administrator is indispensable. Hal Hill is our districts System Administrator...we appreciate you, Hal!
