

Math greetings to all incoming 5th graders!

I want you to have a super summer and at the same time to keep your math skills sharp so we can start off the 2022-2023 school year strong.

Complete the following summer Math activities:

1. Use XtraMath daily to practice your multiplication and division tables at least five times a week. Mastery of your math facts is crucial to success in 5th grade Math. If you are traveling, please try to keep up as best you can. However, we do understand if you are not able to keep up while on a family vacation. At the beginning of school next year there will be math facts quizzes. XtraMath practice over the summer will ensure success.

I will check XtraMath over the summer and update your level when you reach your goals. Goal? 1.5 sec per fact!

2. IXL Summer Boost skill plan - 5th Grade
Four weeks, 20 days of IXL Practice. Work each skill to a 100 smart score! Due upon return to school in August. See the skill plan attached. [IXL Summer Boost skill plan – Math 5th grade](#)

I am looking forward to an awesome year!
