What is an SLP?

SLP stands for speech-language pathologist. SLPs focus on communication. SLPs have a master's degree and maintain national certification through the American Speech and Hearing Association. SLPs can work in schools, hospitals, or clinics with both children and adults.

Specch: SLPs work on improving a person's speech intelligibility. Articulation means the pronunciation of sounds.

Language includes what is understood (receptive language) and what is said (expressive language). This includes skills like following directions, grammar, and vocabulary.

Flucncy: People who stutter have trouble maintaining fluent speech. SLPs work on increasing fluency in adults and children.

Wice: SLPs work with a variety of voice disorders. Voice disorders can be caused by misuse or trauma. Teachers and singers often have voice disorders.

Social pragmatic skills include the ability to use verbal and nonverbal social language with others. SLPs work on increasing these skills to improve communication between people.
