1) Cap & gown with dream catcher

Computer Literacy & Design, Ms. Townsend

For students who successfully passed **Computer Literacy,** new courses that include creativity and rigor are now in session. <u>**First, Yearbook Class**</u> - students are working independently to create a 124-page, hardbound book to document campus activities & events. Each student has a camera to take and edit color-photos, then, upload and design color pages - within hard set deadlines. Recently, they organized the massive task of taking pictures of the entire staff & students - and they met that challenge with grace and calm composure; they were pros. <u>**Second, Graphic Design**</u> - students will be introduced to graphic design principles, color theory, and digitally create color bitmap images, black & white designs, and logos. Students will learn to construct finished products, such as business cards, brochures, and résumés - things that are needed and used in the real-world. These students will also be given instruction to the use of *laser-etching* -- onto wood, leather, and acrylic materials. Looking at the photos on this page only leads a person to believe that the only limit is the student's own imagination. The best part of this class is cultural inclusion.

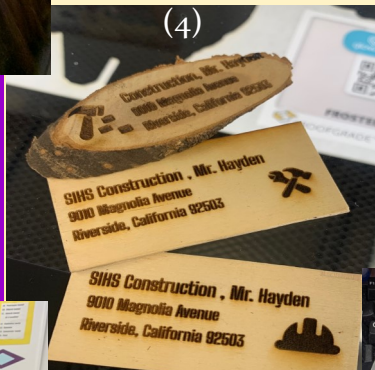

2) Marcaleen & Erin editing the photos in the yearbook

3) Computer Graphics Lab

4) Laser-etched Cedar business cards

5) Laser-etched clock face and keychain

6) Kayla designing online
