Notice of Califon Public School Water Testing and Results

November 2021

Dear Parents/Guardians and Staff Members,

To protect our students and staff along with being in compliance with the Department of Education regulations, Califon Public School recently had its drinking water tested for lead and copper.

We are pleased to inform you that our water readings showed no detectable levels of Lead present which is well below the NJ Standard of 0.015 mg/L. In addition, all water sample results for Copper were also well below the NJ Standard of 1.3 mg/L.

The results of the testing are posted on our website. For information about water quality and sampling for lead at home, contact your local water supplier or state drinking water agency.
