Date Received: 03/18/2024 Date Logged: 03/18/2024 Date Analyzed: 03/18/2024 Date Reported: 03/19/2024

Radon is a naturally occurring radioactive gas that may cause cancer and may be found in drinking water and indoor air. Radon escaping from water can be the source of elevated levels of radon in air. Some people who are exposed to radon in drinking water may be at increased risk of getting cancer over the course of their lifetime, especially lung cancer. The Connecticut Department of Public Health recommends to homeowners served by a private well to consider treatment if their average annual (two or more samples in one year) radon in water is 5000 pCi/L or greater. For more information call the Connecticut Radon Program at 860-509-7367 or visit their website at www.dph.state.ct.us.\BRS\Radon\radon-program.htm.

Disclaimer:

Shawn Price, Director of Laboratory Operations, AccuStar Labs

The counting uncertainty of this radon measurement is +/- 10 %. Factors contributing to uncertainty include statistical variations, daily and seasonal variations in radon concentrations, sample collection techniques and operation of the dwelling. Interference with test conditions may influence the test results.

This report may only be transferred to a third party in its entirety. Laboratory personnel were not involved in the placement or retrieval of the samples. Analytical results relate to the samples as received by the laboratory. Results shown on this report represent levels of radon gas measured between the dates shown in the room or area of the site identified above as "Property Tested". Incorrect information will affect results. The results may not be construed as either predictive or supportive of measurements conducted in any area of this structure at any other time. AccuStar Labs, its employees and agents are not responsible for the consequences of any action taken or not taken based upon the results reported or any verbal or written interpretation of the results.
